Adenosine Aug 26 2019 Homeostasis of key metabolites and metabolic health affects all bodily systems. Not surprisingly, altered metabolic function is associated with a wide spectrum of dysfunctions in the central nervous system – including developmental disorders, acute nervous system injury, and neurodegenerative disorders. Accordingly, metabolism-based therapies offer significant promise as new category of treatment options designed to limit, delay or reverse the disease process by reconstructing homeostatic functions. Increasingly it is appreciated that restoring metabolic health could promote normal nervous system activity, and improve behavior and cognition. *Adenosine: A Key Link Between Metabolism and Central Nervous System Activity* focusses on diverse aspects of adenosine, an evolutionarily conserved homeostatic bioenergetic regulator in the central nervous system. Because of its interrelationship with ATP (adenosine triphosphate), adenosine is integral to cell metabolism. At the same time, adenosine influences neuronal activity directly via receptors, and is involved in biochemical processes related to gene expression. Thus, adenosine is uniquely placed as a reciprocal and rapid link between changes in metabolism and changes in neuronal activity, and, on a longer time scale, to changes in gene expression and long term changes in cell function. Leaders in the field feature basic research on adenosine at the cellular level in the central nervous system, and relate these findings to its recognized potential in diverse acute and chronic disorders. This comprehensive overview of adenosine also highlights emerging adenosine-based treatments and associated opportunities for central nervous system disorders.

Mind Without Fear Jan 24 2022 “A propulsive narrative filled with boldfaced names from business and politics. At times, it is a dishy score settler.”—The New York Times For nine years, Rajat Gupta led McKinsey & Co.—the first foreign-born person to head the world’s most influential management consultancy. He was also the driving force behind major initiatives such as the Indian School of Business and the Public Health Foundation of India. A globally respected figure, he sat on the boards of distinguished philanthropic institutions such as the Gates Foundation and the Global Fund to Fight AIDS, Tuberculosis and Malaria, and corporations, including Goldman Sachs, American Airlines, and Procter & Gamble. In 2011, to the shock of the international business community, Gupta was arrested and charged with insider trading. Against the backdrop of public rage and recrimination that followed the financial crisis, he was found guilty and sentenced to two years in jail. Throughout his trial and imprisonment, Gupta has fought the charges and maintains his innocence to this day. In these pages, Gupta recalls his unlikely rise from orphan to immigrant to international icon as well as his dramatic fall from grace. He writes movingly about his childhood losses, reflects on the challenges he faced as a student and young executive in the United States, and offers a rare inside glimpse into the elite and secretive culture of McKinsey, “the Firm.” And for the first time, he tells his side of the story in the scandal that destroyed his career and reputation. Candid, compelling, and poignant, Gupta’s memoir is much more than a courtroom drama; it is an extraordinary tale of human resilience and personal growth.

The Gupta Empire Jul 06 2020 The present work describes the material and moral progress which India had achieved during the paramount sovereignty of the Gupta emperors in the fourth and fifth centuries a.d. It traces the origin and rise of the ruling family to Srigupta (240-280 a.d.) and concludes with the reign of Kumaragupta III (543 a.d.). It discusses the spirit of the age and the various trends in the sphere of Religion, Economy, Society, Education, Administration, Art and Architecture. It seeks to bring together all the facts and data derivable from different sources--literary, epigraphic and numismatic, the accounts of

foreign visitors, particularly of the Chinese pilgrim Fa-hien who has left a detached and valuable record of India's civilization during the reign of Chandragupta II. Herein we get an accurate picture of India's golden age, the growth of her various institutions, her activities of expansion, colonization and her intercourse with Indonesia, China and other countries. The work is divided into sixteen chapters. It has an index of proper names and an addenda on the hoard of new Imperial Gupta coins discovered at Bayana in Bharatpur. The work is very interesting and instructive and is designed to meet the requirements of the academic student of history and the general reader alike.

Phytoremediation Potential of Bioenergy Plants Apr 02 2020 The globally escalating population necessitates production of more goods and services to fulfil the expanding demands of human beings which resulted in urbanization and industrialization. Uncontrolled industrialization caused two major problems – energy crisis and accelerated environmental pollution throughout the world. Presently, there are technologies which have been proposed or shown to tackle both the problems. Researchers continue to seek more cost effective and environmentally beneficial pathways for problem solving. Plant kingdom comprises of

species which have the potential to resolve the couple problem of pollution and energy. Plants are considered as a potential feedstock for development of renewable energy through biofuels. Another important aspect of plants is their capacity to sequester carbon dioxide and absorb, degrade, and stabilize environmental pollutants such as heavy metals, poly-aromatic hydrocarbons, poly-aromatic biphenyls, radioactive materials, and other chemicals. Thus, plants may be used to provide renewable energy generation and pollution mitigation. An approach that could amalgamate the two aspects can be achieved through phytoremediation (using plants to clean up polluted soil and water), and subsequent generation of energy from the phyto-remediator plants. This would be a major advance in achieving sustainability that focuses on optimizing ‘people’ (social issues), ‘planet’ (environmental issues), and ‘profit’ (financial issues). The “Phytoremediation-Cellulosic Biofuels” (PCB) process will be socially beneficial through reducing pollution impacts on people, ecologically beneficial through pollution abatement, and economically viable through providing revenue that supplies an energy source that is renewable and also provides less dependence on importing foreign energy (energy-independence). The utilization of green plants for pollution remediation and energy production will also tackle some other important global concerns like global climate change, ocean acidification, and land degradation through carbon sequestration, reduced emissions of other greenhouse gases, restoration of degraded lands and waters, and more. This book addresses the overall potential of major plants that have the potential to fulfil the dual purposes of phytoremediation and energy generation. The non-edible bioenergy plants that are explored for this dual objective include *Jatropha curcas*, *Ricinus communis*, *Leucaena leucocephalla*, *Milletia pinnata*, *Canabis sativa*, *Azadirachta indica*, and *Acacia nilotica*. The book addresses all possible aspects of phyto-remediation and energy generation in a holistic way. The contributors are one of most authoritative experts in the field and have covered and compiled the best content most comprehensively. The book is going to be extremely useful for researchers in the area, research students, academicians and also for policy makers for an inclusive understanding and assessment of potential in plant kingdom to solve the dual problem of energy and pollution.
