The Copernican Question Sep 26 2019 In 1543, Nicolaus Copernicus publicly defended his hypothesis that the earth is a planet and the sun a body resting near the center of a finite universe. But why did Copernicus make this bold proposal? And why did it matter? The Copernican Question reframes this pivotal moment in the history of science, centering the story on a conflict over the credibility of astrology that erupted in Italy just as Copernicus arrived in 1496. Copernicus engendered enormous resistance when he sought to protect astrology by reconstituting its astronomical foundations. Robert S. Westman shows that efforts to answer the astrological skeptics became a crucial unifying theme of the early modern scientific movement. His interpretation of this long sixteenth century, from the 1490s to the 1610s, offers a new framework for understanding the great transformations in natural philosophy in the century that followed.

International Developments and Practices in Investigative Interviewing and Interrogation Jan 11 2021 Techniques in the investigative interviewing and interrogation of victims, witnesses and suspects of crime vary around the world, according to a country's individual legal system, religion and culture. Whereas some countries have developed certain interview protocols for witnesses (such as the ABE Guidelines and the NICHD protocol when interviewing children) and the PEACE model of interviewing suspects, other countries continue to use physical coercion and other questionable tactics to elicit information. Until now, there has been very little empirical information about the overall interview and interrogation practices in non-western countries, especially the Middle and Far East. This book addresses this gap, bringing together international experts from over 25 countries and providing in-depth coverage of the various interview and interrogation techniques used across the globe. Volume 1 focuses on the interviewing of victims and witnesses, aiming to provide the necessary information for an understanding of how law enforcement agencies around the world gain valuable information from victims and witnesses in criminal cases. Together, the chapters that make up this volume and the accompanying volume on interviewing suspects, draw on specific national case studies and practices, examine contemporary challenges and identify best practice to enable readers to develop an international, as well as a comparative, perspective of developments worldwide in this important area of criminal investigation. This book will be an essential resource for academics and students engaged in the study of policing, criminal investigation, forensic psychology and criminal law. It will also be of great interest to practitioners, legal professionals and policymakers around the world.

Open Problems in Mathematics Jun 03 2020 The goal in putting together this unique compilation was to present the current status of the solutions to some of the most essential open problems in pure and applied mathematics. Emphasis is also given to problems in interdisciplinary research for which mathematics plays a key role. This volume comprises highly selected contributions by some of the most eminent mathematicians in the international mathematical community on longstanding problems in very active domains of mathematical research. A joint preface by the two volume editors is followed by a personal farewell to John F. Nash, Jr. written by Michael Th. Rassias. An introduction by Mikhail Gromov highlights some of Nash's legendary mathematical achievements. The treatment in this book includes open problems in the following fields: algebraic geometry, number theory, analysis, discrete mathematics, PDEs, differential geometry, topology, K-theory, game theory, fluid mechanics, dynamical systems and ergodic theory, cryptography, theoretical computer science, and more. Extensive discussions surrounding the progress made for each problem are designed to reach a wide community of readers, from graduate students and established research mathematicians to physicists, computer scientists, economists, and research scientists who are looking to develop essential and modern new methods and theories to solve a variety of open problems.

In addition, some important topics in substantive law are addressed.

Cognitive Interviewing Practice Jan 23 2022 The use of the cognitive interviewing method for survey question testing has proliferated and evolved over the past 30 years. In more recent years the method has been applied to the evaluation of information letters and leaflets and to research consent forms. This book provides a practical handbook for implementing cognitive interviewing methods in the context of applied social policy research, based on the approach used by the authors at the NatCen Social Research (NatCen) where cognitive interviewing methods have been used for well over a decade. The book provides a justification for the importance of question testing and evaluation and discusses the position of cognitive interviewing in relation to other questionnaire development and evaluation techniques. Throughout the book, the focus is on providing practical and hands-on guidance around elements such as sampling and recruitment, designing probes, interviewing skills, data management and analysis and how to interpret the findings and use them to improve survey questions and other documents. The book also covers cognitive interviewing in different survey modes, in cross national, cross cultural and multilingual settings and discusses some other potential uses of the method.

Working After Retirement For Dummies Jan 29 2020 The friendly guide for retirees who want to get back into the workforce More than 76 million baby boomers will begin retiring in 2011. Eighty percent of boomers expect to continue working past the age of 65 due to financial and healthcare concerns (seniorcitizensguide.com, 1-06). Working After Retirement For Dummies shows retirees and workers approaching retirement age how to stay in the workforce and thrive after 65 or get back into the workforce after retirement. The book covers new job searching and resume writing; how to overcome employer myths about retirement age workers; and the flexibility of various career options from telecommuting to job sharing. In addition, it also covers nontraditional job search methods that work particularly well for seniors. Even retirement age workers who just want to volunteer their time will find helpful, straightforward advice on getting back to work at any age.

Practice, Learning and Change May 27 2022 The three concepts central to this volume—practice, learning and change—have received very different treatments in the educational literature, an oversight directly confronted here. While learning and change have been extensively theorised, their various contexts articulated and analysed, practice is notably underrepresented. Where much of the literature on learning and change takes the notion of 'practice' as an unexamined given, its co-location as a term with various classifiers, as in 'legal practice' and 'teaching practice', render it curiously devoid of semantic force. In this book, 'practice' is the super-ordinate organising idea. Drawing on what has been termed the 'practice turn in contemporary theory', the work develops a conceptual framework for researching learning in, and on, practice. It challenges received notions of practice, questioning the assumptions, elisions, connotations and silences on the subject. In so doing, it offers fresh insights into learning and change, and how they relate to practice. In tandem with this conceptual work, the book details site-ontological studies of practice and learning in diverse professional and workplace contexts, examining the work of occupations as various as doctors, chefs and orchestral musicians. It demonstrates the value of theorising practice, learning and change, as well as exploring the connections between them amid our evolving social and institutional structures.

Nursing Supervision Jun 23 2019 Addressing the practicalities of clinical supervision, this informative book follows the course of the supervision process, illustrating each stage with an absorbing blend of information, opinion, academic theory, anecdotal material, serious comment and thought-provoking exercises. Emphasis is placed on the purpose and value of clinical supervision, but also on the potential pitfalls those involved may encounter, and how they can be avoided. A number of theories and models are discussed with reference to each stage of supervision, providing a thought-provoking basis for the practical issues raised. Written in a lively and engaging style, this book will enable both supervisors and supervisees to get the best they can from the supervisory experience.

Public Health Communication Interventions Jun 15 2021 The ethical dimensions of health communicators' interventions and campaigns are brought into question in this thought-provoking book. Examining the efforts to effect behavior change, the author questions how far health communication can and should go in changing people's values. The author broadens the current analysis of interventions and presents conceptual frameworks that help identify values and justifications that are embedded in health communication goals, strategies, and evaluation criteria. This critical approach helps explain how and why choices are made in design and implementation, and provides constructs and frameworks to examine them. It also widens the criteria for program evaluation and policymaking, and provides practitioners, planners, policy-makers, researchers, and students with practice-oriented questions.

Lesson Study Research and Practice in Mathematics Education Jul 17 2021 Lesson study is a professional development process that teachers engage in to systematically examine their practice, with the goal of becoming more effective. Originating in Japan, lesson study has gained significant momentum in the mathematics education community in recent years. As a process for professional development, lesson study became highly visible when it was proposed as a means of supporting the common practice of promoting better teaching by disseminating documents like standards, benchmarks and nationally validated curricula. While the body of knowledge about lesson study is growing, it remains somewhat elusive and composed of discrete research endeavors. As a new research area there is no coherent knowledge base yet. This book will contribute to the field bringing the work of researchers and practitioners together to create a resource for extant work. This book describes several aspects of Lesson Study, amongst others: it gives an historical overview of the concept, it addresses issues related to learning and teaching mathematics, it looks at the role of the teacher in the process. The last two sections of the book look at how lesson study can be used with preservice mathematics teachers and at university mathematics methods teaching.

Questions of Travel Apr 25 2022 Contemporary theory is replete with metaphors of travel—displacement, diaspora, borders, exile, migration, nomadism, homelessness, and tourism to name a few. In *Questions of Travel*, Caren Kaplan explores the various metaphoric uses of travel and displacement in literary and feminist theory, traces the political implications of this "traveling theory," and shows how various discourses of displacement link, rather than separate, modernism and postmodernism. Addressing a wide range of writers, including Paul Fussell, Edward Said, James Clifford, Gilles Deleuze, Jean Baudrillard, Gayatri Spivak, Edward Soja, Doreen Massey, Chandra Mohanty, and Adrienne Rich, Kaplan demonstrates that symbols and metaphors of travel are used in ways that obscure key differences of power between nationalities, classes, races, and genders. Neither rejecting nor dismissing the powerful testimony of individual experiences of modern exile or displacement, Kaplan asks how mystified metaphors of travel might be avoided. With a focus on theory's colonial discourses, she reveals how these metaphors continue to operate in the seemingly liberatory critical zones of poststructuralism and feminist theory. The book concludes with a critique of the politics of location as a form of essentialist identity politics and calls for new feminist geographies of place and displacement.

Community Education and Neoliberalism Sep 06 2020 This book explores community education in Ireland and argues that neoliberalism has had a profound effect on community education. Rather than retain its foundational characteristics of collective, equality-led principles and practices, community education has lost much of its independence and has been reshaped into spaces characterised by labour-market activation, vocationalisation and marketisation. These changes have often, though not always, run contrary to the wishes of those involved in community education creating enormous tensions for practitioners, course providers and participants.

Violence Risk Oct 20 2021 The decision to release someone from psychiatric hospital, forensic services or prison is often controversial, and forensic psychologists play a key role in assessing the risk of recidivism. In *Violence Risk*, Chris Webster and Steve Hucker discuss the accuracy of prediction and highlight how violence assessments would improve if well-established findings became entrenched in clinical and research practice. Although the authors write the majority of the text, specialist colleagues add essential material on subjects such as averting spousal assault, sex offending, and improving community support.
