**The Tecate Journals** Oct 03 2022 [CLICK HERE](#) to download a sample chapter from The Tecate Journals \* More than a man-against-nature adventure-the author floats us along the border of political furor, cultural limbo, and dangerous human encounters \*Touches on environmental issues, adrenalin-spiked action, and the author's ambivalence with his own cultural identity \* A first work from a new voice that is parts gritty, elegant, and contemporary The Rio Grande is a national border, a water source, a dangerous rapid with house-sized boulders, a nature refuge, a garbage dump, and a playground, depending on where you are on its 1885-mile course. That's why journalist Keith Bowden decided to become the first person to travel the entire length of the Rio as it forms the border between America and Mexico. This is his fascinating account of the journey by bike, canoe, and raft along one of North America's most overlooked resources. From illegal immigrants and drug runners trying to make it into America to the

border patrol working to stop them; from human coyotes -- smugglers who help people navigate their way into the United States -- to encounters with real coyotes, mountain lions, and other flora and fauna, Bowden reveals a side of America that few of us ever see. The border between the U.S. and Mexico is, in many ways, a country unto itself, where inhabitants share more in common with fellow riverside dwellers than they do with the rest of their countrymen. With this isolated and colorful micro-world as his backdrop, Bowden not only explores his surroundings, but also tests his inner mettle along some of the most dangerous and remote riparian wilderness in North America.

*Yes to the City* Oct 30 2019 A fascinating account of the growing "Yes in My Backyard" urban movement. The exorbitant costs of urban housing and the widening gap in income inequality are fueling a combative new movement in cities around the world. A growing number of influential activists aren't waiting for new public housing to be built. Instead, they're calling for more construction and denser cities in order to increase affordability. *Yes to the City* offers an in-depth look at the "Yes in My Backyard" (YIMBY) movement. From its origins in San Francisco to its current cadre of activists pushing for new apartment towers in places like Boulder, Austin, and London, Max Holleran explores how urban density, once maligned for its association with overpopulated slums, has become a rallying cry for millennial activists locked out of housing markets and unable to pay high rents. Holleran provides a detailed account of YIMBY activists campaigning for construction, new zoning rules, better public transit, and even candidates for local and state office. YIMBY groups draw together an unlikely coalition, from developers and real estate agents to environmentalists, and Holleran looks at the increasingly contentious battles between market-driven pragmatists and rent-control idealists. Arguing that advocates for more housing must carefully weigh their demands for supply with the continuing damage of gentrification, he shows that these individuals see high-density urbanism and walkable urban spaces as progressive statements about the kind of society they would like to create. Chronicling a major shift in housing activism during the past twenty years, *Yes to the City* considers how one movement has reframed conversations about urban growth.

**Border Crosser** Sep 29 2019 Johnny Rico is back. After risking his life as an Afghanistan stop-loss soldier, an experience he described in the cult phenomenon *Blood Makes the Grass Grow Green*, he now dares to embed himself on both sides of America's most dangerous domestic conflict—the war for and against illegal immigration—in an exhilarating new exercise in immersion journalism. The gonzo author—part Hunter Thompson, part George Plimpton—explores a seemingly insoluble issue by getting his

hands dirty and his boots on the ground. As a “typically spoiled American” who doesn’t speak a lick of Spanish, he takes it upon himself to try to cross the Mexican border into the United States illegally. Eager to tell the story from all sides—or simply to get good material for his book—Rico also travels treacherously with the Border Patrol, meets extreme immigrant advocates who publish maps for illegals, visits a modern-day “underground railroad” in Texas, and hunts for miscreants with angry vigilantes. In such hot spots as the Tecate Line, a forty-five-mile stretch of hills on California’s southern fringe, and Arizona’s Amnesty Trail, the single busiest part of the U.S. border, Rico encounters Los Zetas, the paramilitary group that has taken over Mexico’s drug cartels, interviews the volunteer Minutemen, who believe in an imminent and apocalyptic Mexican invasion, and tries to recruit coyotes (human smugglers, usually fortified by meth and cocaine). In his heedless and openly opportunistic style, Rico unearths more truths about this explosive subject than most traditional reporters could ever hope to. *Border Crosser* is another knockout from this new-generation journalist, at once a concerned citizen, courageous spy, and unparalleled author.

Population Genetics of Forest Trees Aug 09 2020 Tropical climates, which occur between 23°30'N and S latitude (Jacob 1988), encompass a wide variety of plant communities (Hartshorn 1983, 1988), many of which are diverse in their woody floras. Within this geographic region, temperature and the amount and seasonality of rainfall define habitat types (UNESCO 1978). The FAO has estimated that there are about 19 million km of potentially forested area in the global tropics, of which 58% were estimated to still be in closed forest in the mid-1970s (Sommers 1976; UNESCO 1978). Of this potentially forested region, 42% is categorized as dry forest lifezone, 33% is tropical moist forest, and 25% is wet or rain forest (Lugo 1988). The species diversity of these tropical habitats is very high. Raven (1976, in Mooney 1988) estimated that 65% of the 250,000 or more plant species of the earth are found in tropical regions. Of this floristic assemblage, a large fraction are woody species. In the well-collected tropical moist forest of Barro Colorado Island, Panama, 39.7% (481 of 1212 species) of the native phanerogams are woody, arborescent species (Croat 1978). Another 21.9% are woody vines and lianas. Southeast Asian Dipterocarp forests may contain 120-200 species of trees per hectare (Whitmore 1984), and recent surveys in upper Amazonia recorded from 89 to 283 woody species ~ 10 cm dbh per hectare (Gentry 1988). Tropical communities thus represent a global woody flora of significant scope.

How Wal-Mart manages this transition in the near future will play a significant role in the determining the character of the global economy. *Wal-Mart World's* impressively broad scope makes it necessary reading for anyone interested in the global impact of this economic colossus.
