The 'War to end all Wars', as seen through the eyes of three young women War is being fought on a

horrific scale in the trenches of France, but it might as well be a world away from sixteen-year-old New Zealander Midge Macpherson, at school in England learning to be a young lady. But the war is coming closer: Midge's brothers are in the army, and her twin, Tim, is listed as 'missing' in the devastating defeat of the Anzac forces at Gallipoli . Desperate to do their bit - and avoid the boredom of school and the restrictions of Society - Midge and her friends Ethel and Anne start a canteen in France, caring for the endless flow of wounded soldiers returning from the front. Midge, recruited by the over-stretched ambulance service, is thrust into carnage and scenes of courage she could never have imagined. And when the war is over, all three girls - and their Anzac boys - discover that even going 'home' can be both strange and wonderful. Exhaustively researched but written with the lightest of touches, this is Jackie French at her very best. PCB Design for Real-World EMI Control Aug 13 2021

Proper design of printed circuit boards can make the difference between a product passing emissions requirements during the first cycle or not. Traditional EMC design practices have been simply rule-based, that is, a list of rules-of-thumb are presented to the board designers to implement. When a particular rule-of-thumb is difficult to implement, it is often ignored. After the product is built, it will often fail emission requirements and various time consuming and costly add-ons are then required. Proper EMC design does not require advanced degrees from universities, nor does it require strenuous mathematics. It does require a basic understanding of the underlying principles of the potential causes of EMC emissions. With this basic understanding, circuit board designers can make trade-off decisions during the design phase to ensure optimum EMC design.

Consideration of these potential sources will allow the design to pass the emissions requirements the first time in the test laboratory. A number of other books have been published on EMC. Most are general books on EMC and do not focus on printed circuit board design. This book is intended to help EMC engineers and design. This book engineers understand the potential sources of emissions and how to reduce, control, or eliminate these sources. This book is intended to be a 'hands-on' book, that is, designers should be able to apply the concepts in this book directly to their designs in the real-world.

[Ruby Slippers, Golden Tears](#) Jan 26 2020 Fairy tales reimagined—in stories by “a distinguished company of writers” including Neil Gaiman, Joyce Carol Oates, and Tanith Lee (Kirkus Reviews). For many of us, the fairy tale was our first exposure to the written word and the power of storytelling. These wondrous works of magic and morality enthralled us, enchanted us, sometimes terrified us, and remain in our hearts and memories still. Once again, World Fantasy Award-winning editors Ellen Datlow and Terri Windling have compiled an extraordinary collection of reimagined tales conceived by some

of today’s most acclaimed contemporary purveyors of literary fantasy, science fiction, and horror, including Neil Gaiman, Gahan Wilson, Joyce Carol Oates, Tanith Lee, Nancy Kress, Gene Wolfe, and others. Remarkable things lurk in these dark and magical woods. Here Beauty confronts a serial-killer Beast, Hansel and Gretel’s witch resides not in a gingerbread house but in a luxurious resort, and Rumpelstiltskin is truly the devil demanding his due, rightfully or otherwise. The hilarious “Roach in Loafers” ingeniously combines the classic “Elves and the Shoemaker” tale with “Puss in Boots” and adds an insectile twist, while in a modern fable that blends The Wizard of Oz and Hans Christian Andersen, Dorothy is set adrift in Hollywoodland, ruby slippers and all. These are not the fairy stories you remember from childhood.

Brand New: The Shape of Brands to Come Sep 02 2020 The world’s leading practitioner of branding predicts the future of companies’ identities in an ever -changing marketing landscape What is the future for brands and branding? Does globalization mean that variety and individuality will be crushed out of existence by massive multinationals? Will everywhere and everything become similar, like the world of airports today? Or will there still be room for brands that thrive on being different? What about the impact of digital technology and increasing customer feedback through the internet and social media? What, in fact, do customers want? Today's businesses, in addition to thinking about price and authenticity, have to deal with corporate social responsibility. How

does this affect the products and services we consume? How does it influence the way we feel about organizations? Are corporations here to maximize profits and grow, or to help society, or both? With the rapid rise of new markets in India, China, Brazil, and elsewhere, will new global brands emerge based around local cultural strengths and heritage? If so, what will this mean for the traditional dominance of brands based on Western cultural norms? Wally Olins's fascinating book looks at every aspect of the world of branding. With his customary flair and no-nonsense prose, he analyzes the problems facing today's organizations, criticizes corporate missteps, praises those companies who seem to be building and sustaining brands efficiently in our brave new world, and predicts the future of branding. No one interested in marketing, business, or contemporary culture will want to be without this book.
