You Twit Face: Your Complete Guide to Nomophobia Apr 04 2020 Nomophobia - the fear of having our phones taken from us - is taking over our lives. The smart devices are in our homes, carried room-to-room as if glued to the hands of our family members. They meander into the bathroom, the laundry room, the shop, the garage, backyard and even into the bedroom where the adults once had their "alone time." Our teenage children require them to either be under their pillows, by their pillows or within arm's reach at a nightstand in order to even sleep at night. The cell phone must be visible for them to take tests at school without withdrawal anxiety. The phones travel where we do - school, the office, the gym, so that we are in constant contact with the virtual world - other people who also have no real lives outside of their phone. They are ringing in churches, movie theaters, restaurants, concerts, funerals. Nothing says "goodbye" to the recently departed like your ring tone from Metallica's Hardwired. Welcome to the world of smart phone addiction.

Mobile Phone Panel Surveys in Developing Countries Jan 26 2022 Household survey data are very useful for monitoring living conditions of citizens of any country. In developing countries, a lot of this data are collected through "traditional" face-to-face household surveys. Due to the remote and dispersed nature of many populations in developing countries, but also because of the complex nature of many survey questionnaires, collection of timely welfare data has often proved expensive and logistically challenging. Yet, there is a need for faster, cheaper to collect, lighter, more nimble data collection methods to address data gaps between big household surveys. The recent proliferation of mobile phone networks has opened new possibilities. By combining baseline data from a traditional household survey with subsequent interviews of selected respondents using mobile phones, this facilitates welfare monitoring and opinion polling almost real time. The purpose of this handbook is to contribute to the development of the new field of mobile phone data collection in developing countries. The handbook documents how this innovative approach to data collection works, its advantages and challenges. The handbook draws primarily from the authors' first-hand experiences with mobile phone surveys in Africa and also benefits from experiences elsewhere. It is intended to serve a diverse audience including those involved in collecting (representative) data using mobile phones, and those using data collected through this approach. For those who will be implementing a mobile phone panel survey, the different chapters guide them through every stage of the implementation process. For potential users of the data collected via mobile phone technology, the handbook presents a new approach to data collection which they can use for monitoring programs and facilitate almost real time decision-making. A further purpose of this book is to contribute to the debate regarding the advantages of the method as well as the challenges associated with it.
